

FactoryWare LMS – Composing the beat of production

Coordination - Direction - Management of
production lines

The whole is more than the sum of its parts.

Your benefits

Increasing productivity through horizontal integration

FactoryWare LMS interconnects machines and automates the execution of machine operations and production workflows. Thus eliminating manual interventions and interruptions.

Increasing productivity through vertical integration

FactoryWare LMS connects ERP-level software with shop floor equipment. It accepts, coordinates and executes production orders and keeps track of all goods and processes. Relevant status information is reported back to ERP-level software and operators.

Transparency and seamless operability through centralized master control system

FactoryWare LMS acts as digital twin of the production line and supplies a graphical 3D representation of all assets, objects and processes in real-time. This 3D representation can also be used for supervision and intuitive user interaction.

Suitability for retrofit into existing shop floors

FactoryWare LMS includes a broad variety of generic interfaces to different kinds of machines.

Improved quality

FactoryWare LMS generates a digital history that reflects all steps of the manufacturing process. This data collection originates subsequent life cycle management solutions and supplies input to continuous process improvements.

Eckelmann – Partner for automation and digitization

We are specialists for the **automation** and **digitization** of industrial manufacturing processes. As a **full-service provider**, we provide all services from a single source – from consulting planning to implementation and long-term support.

We **bring** automation technology and information technology **together** and create solutions for the **factory of the future**: smart – intuitive – autonomous.
