# READY FOR THE FUTURE

Our trade fair highlights 2018

ECKELMANN

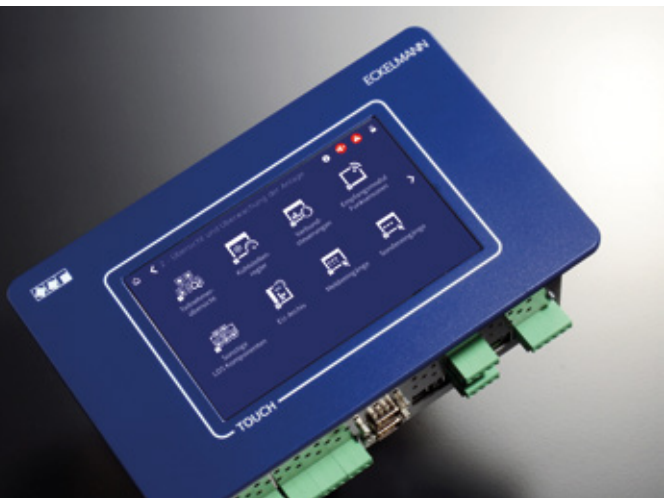

# UPDATE OF EXISTING SYSTEMS

## CI-5 x 00

The system centers of the CI 4 x 00 family in their existing systems can be upgraded with a software update to the CI 5 x 00. Even if the performance of the Virtus 5 cannot be achieved in this way, the update offers some advantages. A CI 5 x 00 provides a web-based configuration interface on site, for operation via a browser and makes the connection to a cloud system possible.

# PACK CONTROLLERS

## VS 3015 CT

Transcritical CO<sub>2</sub> boosters are the special strength of the new VS 3015 CT. They now also support gas and liquid ejectors. The gas cooler fans can be conveniently connected and controlled digitally via Modbus. The new generation natively controls up to three TK and four NK compressors at once and can be expanded flexibly with SIOX modules depending on the application.
